# Research Data Workshop Series - Introduction to Linux

Lucas Alcantara, Ph.D. lucas.ma@uoguelph.ca

# Welcome to Linux

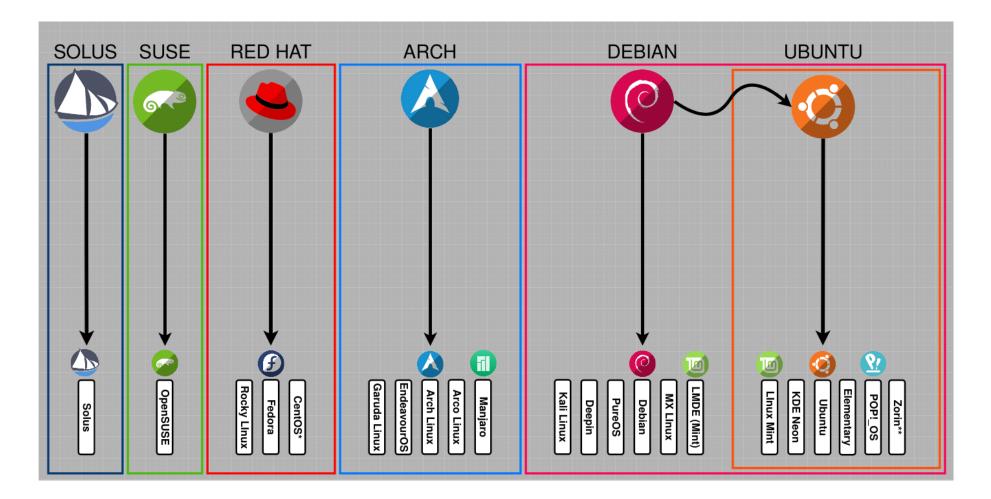

## **2023 Statistics**

- 47% of professional developers use Linux-based operating systems. (Statista)
- Linux powers 39.2% of websites whose operating system is known. (W3Techs)
- Linux powers 85% of smartphones. (Hayden James)
- Linux, the third most popular desktop OS, has a market share of 2.09%. (Statista)
- The Linux market size worldwide will reach \$15.64 billion by 2027. (Fortune Business Insights)
- The world's top 500 fastest supercomputers all run on Linux. (Blackdown)
- 96.3% of the top one million web servers are running Linux. (ZDNet)
- Today, there are over 600 active Linux distros. (Tecmint)

# Useful commands

#### Remote connection

#### ssh

- A program intended to provide secure encrypted communications between two untrusted hosts over an insecure network. It is used for:
  - logging into a remote machine
    - ssh username@hostname
  - executing commands on a remote machine
    - ssh username@hostname command arg1 arg2

#### Whereabouts

#### pwd

- Writes the absolute pathname of the current working directory to the standard output
  - pwd
  - /home/username

#### whoami

- Displays effective user id
  - whoami
  - username

#### Whereabouts

#### id

- Returns user identity
  - id
  - uid=12345(username) gid=12345(username) groups=12345(username), 123456(extragroup)

#### S

- Lists directory contents
  - Is
  - file1 file2 file3 dir1 dir2
- Useful arguments:
  - -a (show hidden files/directories)
  - -I (show output in long format)
  - -h (show sizes in human readable format when -l is used)

## Getting around

#### mkdir

- Make directories
  - mkdir data
  - returns no output
- Useful arguments:
  - -p (creates intermediate directories as required)
  - -m (sets the permissions of the final created directory)

## cd

- Change the working directory
  - cd data
  - cd ../
  - cd /root

#### Getting around

#### chmod

- Change file modes (permissions):
- Octal numbers (<u>https://chmod-calculator.com</u>)
  - chmod 777 data
- who and perm symbols
  - chmod ugo+rwx data (give full access to all users)
  - chmod go-rwx data (remove full access from all users, except owner)

## chgrp

- Change group owner
  - chgrp sample\_group data

#### touch

- Change file/folder access and modification times
  - touch data
- If file/folder does not exist, create new one
  - touch file.txt

#### nano / vim

- Simple command-line text editors
  - nano file.txt
  - vim file.txt

#### cat

- Concatenate and print files
  - cat file.txt
  - cat file1 file2 file3
- Useful arguments
  - -n (Number the output lines, starting at 1)
  - -b (Number the non-blank output lines, starting at 1)

#### ср

- Copy file(s)/directory(ies)
  - Same name: cp file.txt data
  - Different name: cp file.txt data/new\_name.txt
- Useful arguments
  - -r (Recursive copy)

#### mv

- Move/Rename file(s) )/directory(ies)
  - Move: mv file.txt data
  - Rename: mv file.txt new\_name.txt

#### rm

- Remove file(s)
  - rm data/new\_name.txt
- Useful arguments
  - -i (Prompt confirmation)
  - -d (Remove directories)
  - -f (Force remove, overrides -i)

#### In

- Link file(s)/directory(ies)
  - Symbolic link (aka shortcut): In -s /full/path/to/file.txt sym\_link2file.txt

#### head

- Display first lines of a file
  - head file.txt
  - head -n 1 file.txt
- Useful arguments
  - -n (Number of the first lines to print of the specified file, default is 10)

#### tail

- Display last lines of a file
  - tail file.txt
  - tail -n 1 file.txt
- Useful arguments
  - -n (Number of the last lines to print of the specified file, default is 10)
  - -f (Wait for additional data to be appended to the file)

Data streams

- Standard Input (stdin)
  - Input given to a command (file, text, stdout from another command)
- Standard Output (stdout)
  - Output produced by a command (text on your screen)
  - "cat file.txt" prints file content to stdout
- Standard Error (stderr)
  - Error messages produced by a command (also text on your screen)
  - "ls /root" prints error message to stderr

Data streams

- Redirecting stdout to file
  - cat file.txt > newfile.txt
  - cat file1 file2 file3 > newfile.txt
  - cat file1 > appended\_file.txt
  - cat file2 >> appended\_file.txt
  - cat file3 >> appended\_file.txt
- Redirecting stdout to stdin
  - Is –I | head

#### less

- Allows backward and forward movement in the file
- Does not have to read the entire input file before starting
  - less file.txt
- Useful arguments
  - -S (Causes lines longer than the screen width to be truncated rather than wrapped)
  - -N (Display line numbers at the beginning of each line)
- Useful features
  - /pattern (Search for pattern in file keep pressing / + Enter to move to next pattern instance)
  - Enter (Moves to next line PageUp and PageDown should also work similarly)
  - q (Escape less command)

## Search

#### find

- Recursively descends the directory tree listed in search of a pattern
  - find / –name file.txt
- Useful arguments
  - -name (search by name)
  - -type f (pattern is a file)
  - -type –d (pattern is a directory)

#### Search

#### grep

- Search any given input files, selecting lines that match one or more patterns.
- By default, a pattern matches an input line if the regular expression (RE) in the pattern matches the input line without its trailing newline.
- Each input line that matches at least one of the patterns is written to the standard output
  - grep pattern file.txt
- Useful arguments
  - -v (invert match)
  - -n (add line numbers to stdout)
  - -c (count of patterns in stdin)
  - -I (ignore case)
  - -r (recursive search)

#### Useful commands

- grep "^start" file.txt
- grep "end\$" file.txt
- grep "t[wo]o" file.txt
- cat ls -l / | grep home
